

## Parking Curbs / Bumpers

Century Group Inc. is a leading manufacturer and supplier of precast concrete parking curbs / bumpers to retail and industrial customers, building contractors and real estate developers across the United States. Also known as wheel stops, parking chocks, curb stops and bumper blocks, the Century parking curbs / bumpers are designed to protect a large array of structures and other parked vehicles from being struck by vehicular traffic. Century's high strength concrete parking curbs / bumpers feature the longest service life, superior stability and strength to withstand vehicular traffic wheel impacts including light vehicles, snowplows and parking lot sweeping equipment.

### *Superior Quality*

The Century precast concrete parking curbs are manufactured using high strength 5,000 p.s.i. concrete 28 days and American grade 60 steel reinforcement to insure the highest quality concrete parking curbs. Century Group operates all of its own precast concrete manufacturing plants batching all of its concrete

### *Safe Design*

The Century concrete parking curbs / bumpers are designed to maximize durability and safety. The sides of the parking curbs have a graduated taper to relieve impact pressure on both the vehicular tires, the anchor pins and pavement surface when struck by vehicle tires. The slope design also helps relieve impact pressure and protect vehicle tires and rims from punctures, tears and dents. The standard Century parking curbs are 5"x9"x6' in length. Concrete parking curbs can be manufactured to custom lengths to fit specific project requirements. Parking curbs can also accept safety yellow and ADA blue paint when required. Larger custom parking curbs / bumpers can be designed and manufactured by Century Group for applications where large industrial vehicles and equipment are using the project area.

### **Protection**

The Century precast concrete parking curbs / bumpers are installed to protect a large variety of structures from accidental vehicular impact. Concrete parking curbs are commonly used in retail businesses, schools, churches and public parking lots to protect signage, utility poles, shopping carts, garbage receptacles and other parked vehicles. The concrete parking curbs are also used to line sidewalks to protect pedestrians from vehicular traffic.
