DESIGNER'S NOTES:

When the parking area is located on a curve, the dimensions for the parking spaces should be adjusted (fanned) to compensate for curvature.

An island up to 14ft wide may be included between every ten stalls in the parking area.

The location of the pedestrian curb ramp for the ACCESSIBLE will depend on the site development and landing location.

The need for 150ft parking stalls should be studied on a case by case basis and additional parking provided for as many as required.
